

## CCDB-CLIMATE CHANGE PROGRAM

Christian Commission for Development in Bangladesh (CCDB) is a national NGO established in 1973 envisioning a just and caring society, working to create a society where the poor, marginalized and vulnerable people can claim and enjoy their rights and seek justice for a sustainable livelihood.

Experiencing the devastating consequences of different disasters in Bangladesh, CCDB realized that concrete solutions are needed to address climate change problems to initiate the transition to a climate resilient future. Therefore, CCDB set up a dedicated Climate Change Program in 2009. The program aims to create a climate sensitive and resilient society. It emphasizes on knowledge generation and sharing, climate learning and education, innovation of climate solutions, technology demonstration and dissemination, capacity development and community resilience building. The Climate Change Program consists of four components –

|  |                               |                |                           |
|--|-------------------------------|----------------|---------------------------|
| Research, Advocacy & Capacity Building | Community Resilience Building | Climate Center | Greenhouse Gas Mitigation |
|--|-------------------------------|----------------|---------------------------|

The program has formed a reigning advisory body having technically sound resource persons of the country and abroad. CCDB will conduct the Climate Change Training at the CCDB Hope Foundation which is the specialized center for conducting human and organizational capacity building initiatives.

## 5<sup>TH</sup> ANNUAL TRAINING ON CLIMATE CHANGE ADAPTATION & MITIGATION

11-14 Nov 2019

2-5 Dec 2019

13-16 Jan 2020

Training  
Dates

**Brot**  
für die Welt

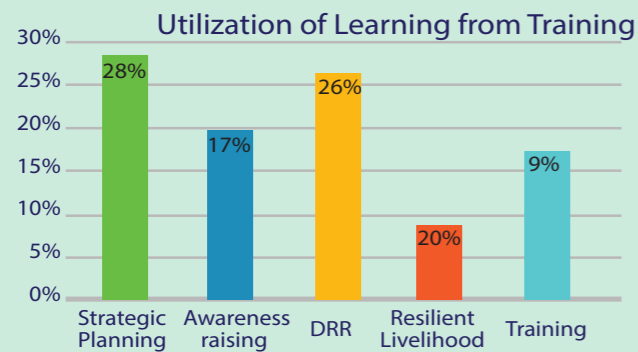

Organized by  
Christian Commission for Development in Bangladesh (CCDB)

## GRAB THE OPPORTUNITY!

Climate change and disasters are posing serious threats in sustaining the development outcome, and it is imperative that the issue of building resilience to climate change is adequately integrated in the current discourse of development as well as addressed through project planning process by different actors including the government and NGOs. CCDB is going to launch its 5th Annual Training on Climate Change Adaptation and Mitigation to build up the capacity of professionals with a unique focus on climate technologies both in agriculture and non-agricultural sector. The course will provide participants with a sound understanding on climate change issues as well as technological solutions to address the impact of climate change.

The training impact assessment of last four batches indicates that the training knowledge is being used in strategic planning, awareness raising, DRR, resilient livelihoods and capacity building.

The training course contributes to professional human resource development of key stakeholders in the field of climate resilient and low carbon development. The participants are trained to enhance their capacities, to apply innovative technologies, and to design and implement climate projects in ways that consider local contexts. Under the broader framework of sustainable development, the participants of the training program will have the skill to work in vast arena of climate change adaptation, disaster risk reduction, resilience building, low carbon solutions and climate risk assessments. This course will enable them to interact efficiently and build network with direct stakeholders and other interested parties at local, national or global level.

### GET ENROLLED NOW!

## INTENDED PARTICIPANTS

The training is designed primarily for young and mid-level professionals from both government and non-government organizations including the entrepreneurs from the private sector who would like to convert our climate risks into opportunities. Fresh university graduates from relevant disciplines are also welcome to join. There would be an intake of maximum 30 participants for each batch with a balanced ratio of male and female.

## UNIQUENESS OF THE TRAINING

## COURSE INFORMATION

**Duration:** 12 days in three months (4 days in each month, November 2019-January 2020)

**Mode of Training:** Fully residential and field visit

**Location:** CCDB Hope Foundation, Savar, Dhaka

**Total Cost:** BDT 80,000

**Scholarship from CCDB:** BDT 60,000 (for each participant)

**Fee to be paid by the Participant:** BDT 20,000

**Payment:** In favor of 'Christian Commission for Development in Bangladesh (CCDB)' C/A no. 0200001139062, Agrani Bank Ltd, Senpara Branch, Mirpur-10, Dhaka.

**Application deadline: 27 October 2019**

## COURSE OUTLINE

**11-14 November 2019**

Understanding climate change

- Science of climate change
- Climate change adaptation and mitigation
- Climate Change impacts at Global & Bangladesh level
- Gender and climate change

Disaster management

- Disaster Risk Reduction (DRR), Urban DRR
- Disaster Resilience
- Disaster management, tools and techniques including early warning system
- Woman in DRR-CCA: SDG context

**2-5 December 2019**

Agricultural impacts, adaptation & mitigation technologies

- Climate change impacts on agriculture and food security
- Different adaptation activities in Agriculture
- Mitigation and climate resilient agriculture
- Sectoral response: Livestock, Forestry and Fisheries

Non-agricultural adaptation & mitigation technologies

- Adaptation and mitigation technologies in non-agricultural sector
- Renewable energy

**13-16 January 2020**

Global & national policy responses to climate change

- Global and National policies on Climate Change and DRR
- Global climate negotiations
- Climate Finance, Loss and Damage

Field observation

- Community level
- Climate Technology Park
- Nationally renowned institutions
